Governance & Control for SAP BTP®

An agentic AI portal that provides you always-on visibility, security posture and remediation guidance across your SAP BTP® landscape.

Does your SAP BTP® grow faster than the teams managing it?

A proof of concept becomes a production app.

One subaccount becomes twenty.

Nobody agreed on naming conventions, security domains or who owns what.

01

No inventory

No central map of services, apps, and integrations across subaccounts.

02

Cost blind spots

Unused services and over-provisioned entitlements are increasing costs.

03

Security gaps

Subdomains, role configs and destinations set up ad hoc during a POC and never reviewed.

04

No subaccount strategy

No naming conventions, no tier definitions: dev, test and prod all mixed together.

05

SAP best practices ignored

What SAP recommends and what was actually built diverged long ago.

06

Unclear ownership

When something breaks in production, nobody can answer: who is responsible?

Linko Governance & Control for SAP BTP®

Always-on visibility into your SAP BTP® platform with our agentic AI portal.

Take back control of your SAP BTP® platform!

Runs inside your BTP® environment

Built with native BTP® technology

Quick Implementation
(hours, not weeks)

Subscription model
(implementation & support included)

Remediation Plan for Lynxmind SAP BTP Global Account

Executive priority

Focus first on security and identity risks, then cost governance, then account structure and metadata hygiene.

1. Immediate actions — 0 to 2 weeks

Priority	Action	Scope	Related findings
High	Reduce excessive administrator assignments	Lynxmind AI, Lynx-Joule-Studio	IAM-002
High	Disable SAP Default Identity Provider	All 3 subaccounts	SEC-004
High	Replace BasicAuthentication destination	Lynxmind AI, destination linko-mail	SEC-001
Medium	Review unauthenticated destinations	Lynx-Joule-Studio, Lynx-Joule-for-Business	SEC-003
Medium	Remove or validate ghost users	All 3 subaccounts	IAM-001

1.1 Reduce high-privilege users

Findings:

IAM-002

on Lynxmind AI

IAM-002

on Lynx-Joule-Studio

Current issue:

Both subaccounts have 6 administrators, above the threshold of 5.

Recommended target:

How much & where is it heading? Will we run out of budget?

Prod vs non-production cost? Where does the money go?

Get not only insights, but guidance on how to optimize cost, improve security posture & prioritize remediation.

The screenshot shows the Linko Governance & Control for SAP BTP® interface. At the top, there's a header with the Linko logo, account information (Global account, Global Account L), and a 'Run' button with a date and score. Below the header, there's a sidebar with icons for various functions. The main area displays a chat conversation. The user asks, 'What is the most urgent risk?'. Linko responds with a detailed finding titled 'Most urgent risk: Default Identity Provider active across all subaccounts — SEC-004'. The response includes a table of findings, a section titled 'Why this is urgent' (circled in red), a 'Recommended immediate action' list, and 'Next highest risks to address'.

What is the most urgent risk?

Linko

Most urgent risk: Default Identity Provider active across all subaccounts — SEC-004

The most urgent risk is that the SAP default Identity Provider (sap.default) is still active in **all 3 subaccounts**:

Subaccount	Finding
Lynxmind AI	SEC-004
Lynx-Joule-for-Business	SEC-004
Lynx-Joule-Studio	SEC-004

Why this is urgent

Keeping the default SAP IdP active can allow user access paths outside your corporate identity governance. That increases the risk of:

- Users being created or authenticated outside corporate control
- Weaker enforcement of MFA / conditional access policies
- Harder access reviews and offboarding
- Potential bypass of your central IAS / corporate IdP setup

Recommended immediate action

- Confirm your corporate IdP / IAS trust is configured and working.
- Disable sap.default as active identity Provider in each subaccount.
- Ensure all users authenticate only via the corporate IdP.
- Review existing users after disabling it, especially ghost users flagged under IAM-001.

Next highest risks to address

After SEC-004, I would prioritize:

- SEC-001 — BasicAuthentication destination linko-mail in Lynxmind AI
- IAM-002 — Too many administrators in Lynxmind AI and Lynx-Joule-Studio
- SEC-003 — Destinations without authentication in Joule subaccounts

No more spreadsheets all over the place to track findings and actions, owners & statuses. All in one place, fully traceable.

Remediation Plan for Lynxmind SAP BTP

Priority 1 — High-risk security and IAM fixes

Priority	Finding	Scope	Action	Target
P1	SEC-004 Default Identity Provider active	Lynxmind AI, Lynx-Joule-Studio	Disable sap.default trust and enforce corporate IAS / IdP login only. Validate emergency admin access before disabling.	1–2 weeks
P1	SEC-001 BasicAuthentication destination	Lynxmind AI	Replace linko-mail destination authentication with OAuth2 Client Credentials, JWT Bearer, or Principal Propagation. Rotate the current password/secret after migration.	1–2 weeks
P1	IAM-002 Too many administrators	Lynxmind AI, Lynx-Joule-Studio	Reduce admin users from 6 to ≤5, ideally to 2–3 named platform admins. Move others to viewer/operator/custom roles.	1–2 weeks

Priority 2 — Access cleanup

Finding	Scope	Action
IAM-001 Ghost users	Lynxmind AI	Review and remove if not required.
IAM-001 Ghost users	Lynx-Joule-for-Business	Review and remove if not required.
IAM-001 Ghost users	Lynx-Joule-Studio	Review the never-logged-in entry. There may be duplicate user records; consolidate if applicable.

Built with native SAP BTP® technology

Single-tenant · read-only · 100% SAP BTP

Two ways to use it.

Run it continuously in your own BTP or ask us for a one-off report.
Same engine, different commitment.

BTP Operations Platform

Deploy Linko in your own BTP. Continuous control over governance and security.

- ✓ Runs inside your own BTP
- ✓ Unlimited assessments & scheduling
- ✓ Findings tracking & drift over time
- ✓ The AI agent, always on
- ✓ For continuous governance & security

PAY PER REPORT

Ad-hoc Technical Report

We run it from our platform and email you the full PDF. No tool access needed.

- ✓ We run it for you
- ✓ Full PDF report emailed
- ✓ Ideal for audits & M&A
- ✓ Point-in-time snapshot
- ✓ No deployment required

Linko vs SAP Joule vs SAP MCP for BTP

Joule answers, SAP MCP executes - only **Linko** improves governance: assess, score, prioritize, remediation plans.

	BEST FOR BTP GOVERNANCE  LINKO	SAP JOULE	SAP MCP for BTP admin
Governance	✓ Structured, automated assessments with a maturity score and findings tracker	✗ Ad-hoc chat only - no assessment or report	✗ Executes admin actions on command - no assessment, score or findings
Security	✓ Identifies security risks and gives remediation plans	✗ Not supported - points to SAP docs or paid services	✗ Can change security settings on request, but detects no risks (read-write by design)
Cost visibility	✓ Actionable, down to subaccounts & services: cost anomalies, prod vs non-prod, service inventory	✓ Strong cost analysis at the global-account level	✗ Not a cost tool - wraps admin APIs (accounts, entitlements, provisioning, authorizations)
Monitoring	✓ Continuous and automated - always up to date	✗ Query-based, on demand - you have to ask each time	✗ On-demand tool calls only - no continuous monitoring or history
Best for	✓ Teams that want a single tool to find AND fix governance / security / cost issues	✓ Quick cost questions and general BTP Q&A inside SAP's own ecosystem	✓ Hands-free admin automation - create subaccounts, assign entitlements - from an AI assistant
